

The “Top 10 List” for Essential Drugs in the Emergency Drug Kit

*by Dr. Daniel G. Pompa**

Today there are more medically compromised patients coming into our offices than ever before. As a result, a more detailed medical history and medical evaluation should be taken prior to beginning treatment.

This will be a half day seminar on the essential drugs needed to make a medical emergency kit for an office. In addition ,we will discuss four (4) basic tests that can easily be performed to help in the physical diagnosis of a patients medical status.

We will also discuss the “Conversational History” and how this can pick up many medical issues not revealed by the standard health history form. This can be performed by the dentist or staff and can prevent many potential medical emergencies from occurring.
